Ch.5 Where Tigers Swim

* Model RTC

I watch the log in a disinterested way, waiting for it to drift closer to our boat.

a. Who is 'I' mentioned in the above extract? What is the 'log' in real in the lesson

Ans 'I' mentioned in the above extract is the narrator. The 'log' in real is the wild tigeress mentioned in the lesson.

b. Name the river the narrator was travelling on which two fragile creatures are given in the lesson that had amazing flying capabilities?

Ans The river, the narrator was travelling on was Netidhopani River in the Sunderbans Tiger Reserve. A dragonfly and a common wanderer butterfly are two creatures given in the lesson that had amazing flying capabilities

c. What instructions does the narrator give to the boatman?

Ans The narrator instructed the boatman to maintain the distance of 30 meters from the wild cat and also not to cut off her path and ~~go to~~ to get

better look.

d. List the traits of the Royal Bengal Tiger based on what you have read in the chapter.

Ans. The traits of the Royal Bengal Tiger are majestic, powerful, terrifying, vulnerable, beautiful, striking, competent swimmer, curious

e. Why do you think humans come into conflict with their environment?

Ans. Humans look to serve their own interest without worrying about the effects it will have on the environment. Therefore they come into conflict with it.

RTCs

1. Describe the encounter between the narrator and the tiger.

Ans. The narrator spotted a log in a disinterested way, waiting for it to drift closer to the boat. But, then the narrator notices that the log moves at a 90° degree angle towards them. At a distance of 150 metres, the narrator looks through his binoculars and sees a small-sized shape - certainly not a log. It took him 10 seconds to realise that it was not a wild tigeress.

2. What was happening at Malta Four Forest Compartment? What was the author's view about this activity?

Scores of labourers were hacking a huge, sweet water pond out of the mangrove swamp. The narrator's view on this was that he thought the creatures living there had learnt to survive in the brackish water environment, without the interventions of humans.

3. What does the author say about the biodiversity of the Sunderbans?

The author describes the biodiversity of the Sunderbans as a deltaic patch of low-lying mud and silt and is a tropical estuarine swamp forest where as many as 65 species of mangrove plants grow. It is also a world heritage site declared by UNESCO. It is situated at the confluence of Ganga, Brahmaputra and the Meghna.

4. What is the significance of the Sunderbans?

Sunderbans is not only significant as a wildlife habitat but it also protects the region against the direct onslaught of cyclones.

5. How did the mangroves prevent more extensive damage caused by Cyclone Amphan

The ecosystem nurtured and sustained by the mangroves not only adds to the wealth of

flora and fauna in this area but the swamps themselves act as a buffer zone to cyclones as well. In this way more extensive damage was prevented by the mangroves.

6. Name the various species of plant and animal life mentioned in the extract. Classify the animals into creatures of the air, water and land.

Ans. On the slick mud banks that melt like chocolate into water, crocodiles, monitor lizards, mudskippers and fiddler crabs revealed themselves from time to time. All these creatures are animals found on land ~~exc~~ except the mudskippers which are found on both land and water (amphibians). The pipistrelles are ~~birds~~ mammals found in the air.

7. Give two examples of similes from the chapter and explain what they mean.

Ans. Two examples of similes and their meanings are:

(i) Rivers and tides circulate nutrients like a chef might stir a great soup - means just how a chef ~~mix~~ stirs all the ingredients in a soup the same way, rivers and tides stir/circulate nutrients throughout the place.

(ii) Paddle like paws - means that the tiger's paws have a shape of a paddle.
